Shady Cove, OR | Open to Remote Positions

SUMMARY

Aspiring Software Engineer with strong backend and full-stack development skills, currently pursuing an Honors B.S./M.S. in Computer Science with a 4.0 GPA. Experienced in Python, Flask, Elixir, and web security research. Built and deployed several web applications and contributed to research in domain control validation. Seeking a remote software engineering role to apply and expand my technical expertise.

EDUCATION

Oregon State University — M.S. Computer Science *(Expected Apr. 2027)*
GPA: 4.0 | Alpha Sigma Lambda Honor Society

Oregon State University — Honors B.S. Computer Science *(Expected Apr. 2026)*
GPA: 3.97 | Honors Thesis | Alpha Sigma Lambda Honor Society

Rogue Community College — A.S. Computer Science *(Apr. 2024)*
GPA: 3.93 | Member, Honor Society

PROJECTS

TOTP Authentication System | *Elixir, Phoenix*

- Developed a Time-based One-Time Password (TOTP) authentication system using Elixir and Phoenix framework.
- Implemented secure token generation and validation with proper cryptographic standards.
- Created a user-friendly interface for account setup and authentication management.

Stake Website | *Python, Flask, HTML/CSS*

- Designed and deployed a dynamic website for church operations, integrating bot detection and secure user access.
- Maintained infrastructure and supported stakeholder updates.

CT Domain Data & DomainScout | *Python, Flask, Research*

- Built a tool to analyze domain control validation vulnerabilities using Certificate Transparency logs.
- Created a GUI to surface vulnerable domains with disposable WHOIS contact methods.
- Authored a research paper for submission to the Internet Measurement Conference.

Engineering Services Database | *Flask, MySQL, Jinja2*

- Developed a full-stack CRUD web application to manage service records using Python, Flask, and MySQL.
- Implemented intuitive user interface and secure database operations.

Low-Level IO in Assembly | *x86 Assembly*

- Created an interactive CLI tool to parse, validate, and compute operations on signed decimal inputs.

- Handled input validation, conversion, and basic arithmetic with user prompts.

TECHNICAL SKILLS

Languages: Python, Elixir, C, C++, Bash, x86 Assembly, SQL, HTML/CSS, JavaScript

Tools & Frameworks: Flask, Phoenix, MySQL, SQLite, MongoDB, React, Git, Docker, AWS, GCP, Node.js, Express, Mix, Jupyter, CMake, Postman

Platforms: Linux, Windows, macOS

Other: Windows System Administration, Networking Troubleshooting

EXPERIENCE

Oregon State University — Cybersecurity Research Fellow

Apr 2024 – Present

- Conduct research in cybersecurity with focus on domain control validation and web security vulnerabilities.
- Collaborate with faculty on academic research projects and paper publications.
- Contribute to ongoing security research initiatives within the computer science department.

ARUP Laboratories — Technical Systems Trainer

Aug 2016 – Present

- Led technical onboarding and training of new hires across complex healthcare systems.
- Maintained and revised SOPs and internal training platforms.
- Provided tier-2 technical support and resolved complex issues using CRM, LMS, and lab information systems.
- Supported IT operations with cross-department coordination and strong analytical skills.

COMMUNITY SERVICE

- Volunteer, ARUP Utah Domestic Violence Coalition 5K
- Co-Chair, International Humanitarian Law, Red Cross Volunteer Services
- Volunteer, Primary Children's Hospital & Bingham Creek Library
- Member, ARUP Lab Week Planning Committee
